quick tour of the topic

By W Boudville

The title is an aspiration more than an achievable result. But that is the aim of the author and so too of you the reader. To make controllable fusion a reality. The book is rather slender. Bobin gives a presentation that focuses on the key physics of plasma. You get an appreciation of the intricacies involved.

The book is suitable for an undergraduate majoring in physics or engineering who has enough technical background to follow the narrative.

If this does pique your interest, then certainly you should turn to other lengthier texts that give a deeper discussion. However, the list price of \$68 seems a little steep.
