An ideal practitioner's tool, this book clearly examines international law and provides practical steps that can be taken to minimize political risk and to deal with expropriation when it occurs. A systematic format covers relevant international law; defines political risk in general and in its most common forms; discusses available investment treaties and related mechanisms and institutions that might make a given developing country more attractive than another; considers pre-investment decisions that can reduce political risk, from ways to structure transactions to procuring investment insurance; and details the options open to an investor after an investment is affected.

International Investment, Political Risk, and Dispute Resolution provides a practical, sophisticated, and comprehensive discussion of all the relevant issues related to political risk:

- The political risk of expropriation, both direct and indirect
- Subtle yet nefarious forms of "indirect" and "creeping" expropriation that can be more difficult to prove, identify, quantify, and protect against
- Protections available under international law to minimize such political risks
- The role of bilateral investment treaties, government-sponsored and private investment insurance, and various provisions that may be utilized in investment agreements between the investor and the host state
- Measures and steps that can be taken to reduce or respond to political risk, including the proper application of international arbitration
